

# Daisy Demo Site

---

If you want to evaluate or explore daisy CMS without installing it on your own system, there is now a live demo site available at:

<http://demo.daisycms.org><sup>1</sup>

You may [login](#)<sup>2</sup> with the following credentials:

## Administrator role:

Username: *admin*

Password: *admin*

## User role:

Username: *user*

Password: *user*

This daisy instance was compiled from SVN revision 3762. I might update the version from time to time, but I'm not able to maintain that service as a live demo build from a daily svn snapshot, as [proposed](#)<sup>3</sup> on the mailing list.

### NOTE

The demo site is now compiled from the 2.0 branch of Daisy. The namespace of the repository is Demo.

### NOTE

Due to security reasons, the document task function was disabled on the demo site.

The daisy repository will be reset to its initial state every 24 hours. This offer is meant as a public service, so please do not change the password of the existing administrator and/or user account.

Enjoy exploring daisy CMS!
